Storage Innovator. Trusted Partner.

Our Story: Morro Data was founded by Paul Tien, who is one of the original visionaries for simple, high capacity, redundant storage for large and small enterprises. A decade ago Tien launched ReadyNAS, which was later acquired by NETGEAR and became the number one selling NAS.

Now the explosive growth of unstructured file data has exceeded the limits of traditional storage solutions. Collaboration has also become much more important and IT Managers are pressed to do more with less. Cloud brings many benefits. A next generation NAS 2.0 solution is required.

By offering a hybrid cloud architecture with caching gateway and a global file system, Morro Data CloudNAS modernizes enterprise storage to sync, lock, and protect office documents and design files with a cloud-first approach while continuing to present the fast, secure, and familiar NAS interface to users.

Businesses in AEC, Manufacturing, Logistics, Training, Finance, M&E, Life Sciences, and others are using CloudNAS 3-in-1 global file services to quickly and efficiently manage consolidated unlimited file storage, multiple office collaboration, and instant disaster recovery.
