CACHED CLOUD ACCELERATION

Enterprise Solution Built for the SMB

Morro delivers **Cached Cloud Acceleration** powered by xCache for SMBs allowing for a fast, simple and affordable cloud storage solution. Cached Cloud provides the ability for SMBs handling large file sizes to especially benefit with gigabit speed transfer to the CacheDrive, allowing employees to simply store and move on while the CacheDrive takes care of the rest. xCache also provides a smarter storage solution allowing customers to free up their internet connection by accessing files from the cache instead of the cloud.

The Benefits of Morro Data Cached Cloud Acceleration

It's the best of both worlds - The power of the cloud with network-attached performance.

FAST TRANSFERS

Big Data is here and files are getting larger. FTP is manually intensive and error prone. Cloud storage apps require the PC to be active and take up limited disk space. With Morro Data CacheDrive file transfer is as easy as drag-and-drop.

ULTIMATE PERFORMANCE

The CacheDrive built on xCache technology ensures active files are available locally at gigabit LAN speeds, making the cloud storage appear as if on-premises.

FLEXIBLE

Morro Data can make your Dropbox or OneDrive faster. Simply connect your account and use it to boost performance. If you need a storage solution we offer the Morro Cloud built on Amazon S3.

SMART

With Cached Cloud, files only need to be transmitted once per location with all users in that location accessing the locally cached copy. The TARDDS sync technology ensures files are fully de-duped, saving on repeat transmissions.

GLOBAL

Reduce VPN reliance with the Morro Data Global File System. Files saved in one location are available to all, while permission controls provide fine grain data security. IT managers can eliminate complex VPN setup, enhancing group productivity and user satisfaction.
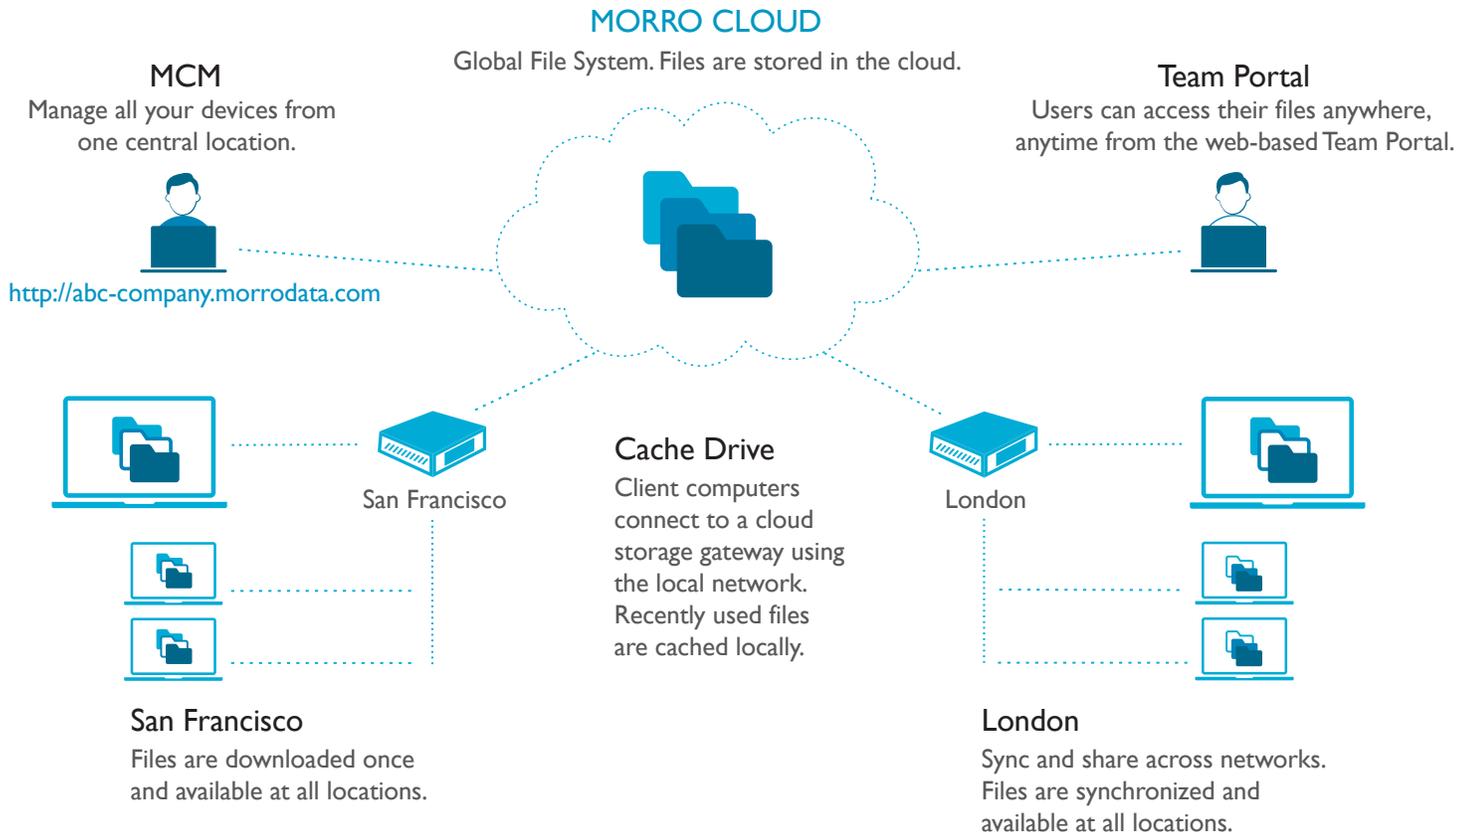

COST EFFECTIVE

With no per user fees, Morro Data is more affordable and encourages adoption across the company instead of islanding users to reduce charges. CacheDrive also saves on internet bandwidth charges while the Global File System eliminates complex VPNs.

How it Works

Files are stored in the cloud, cached in the gateway, and synced globally.

MORRO CLOUD
Global File System. Files are stored in the cloud.

MCM
Manage all your devices from one central location.

http://abc-company.morrodata.com

Team Portal
Users can access their files anywhere, anytime from the web-based Team Portal.

San Francisco

Cache Drive
Client computers connect to a cloud storage gateway using the local network. Recently used files are cached locally.

London

San Francisco
Files are downloaded once and available at all locations.

London
Sync and share across networks. Files are synchronized and available at all locations.

"Morro Data has transformed how we transport files between our offices. With each office coming online while the other is going offline efficient transferring of large files is top priority to EIGHT25MEDIA. Morro's Cache Cloud Acceleration allows our designers to upload large files in seconds compared to the 30 to 40 minutes they were spending each day with our previous cloud storage solution. We also love the cost savings from the bandwidth efficiency and reduction in per user fees."

– Head of Digital Strategy, EIGHT25MEDIA, *Jahzeel Omar*
